# Intention

After having focused especially on lessons learned on medical comprehensive approach in missions at our first conference 2013, we extended our programme 2015 into the highly relevant - field of **Global Health and African Health**, including the ebola virus outbreak.

Based on this experience, the IMC 2019 will focus on Health and Conflict - Leadership and Responsibility. The **three main characteristics** of the MNJHQ/JSEC Ulm's IMC series will remain the same: **Strategic and operative** level topics, civil-military medical interface and "out-of-the-box-thinking".

The **main purpose** of this conference will still be to present, discuss and share and experience in the field of medical support and related issues bringing together various national and interational, civilian and military perspectives and reflecting changes and developments.

The specific atmosphere in the gorgeous monastery in Roggenburg 30 km SE of Ulm will certainly our common approach.
